

ABSTRACT OF THE INVENTION

An allocation structure for a wireless cursor transmitter, operative to allocate a transmitter in an expansion slot of a portable computer. The transmitter has a card body and a plurality of buttons formed on a top surface
5 of the card body. The buttons are press-control buttons. The bulk body further has a connecting part at one side thereof. The card body is connected to the portable computer by inserting the connecting part into the expansion slot. Thereby, the transmitter is integrated with the portable computer. The access, storage and portability of the transmitter are much easier and
10 convenient for the user.
